Restoration of old canal walls

Wallvegetation is unique

Commonly used methods to preserve wallvegetation:

- removing plants and putting them back later
- mixing traces and seeds with the new mortar
- removing the plants with their surroundings and putting them back later
- leaving the plants where they are and carrying out repairs around them.

Secretarie

Restoration of old canal walls

Best results with the cloud method:

- At relatively low cost certain areas (clouds) of the walls can be kept open for vegetation. They require very little maintenance.
- The wall around the clouds must be constructed with a view to easy maintenance and conservation.
